SIMILARITY: Belongs to the immunoglobulin superfamily. L1/neurofascin/NgCAM family.

SIMILARITY: Contains 6 immunoglobulin-like C2-type domains. SIMILARITY: Contains 5 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SUBCELLULAR LOCATI

SIMILARITY: Belongs to the immunoglobulin superfamily.
L1/neurofascin/NgCAM family.
SIMILARITY: Contains 6 immunoglobulin-like C2-type dom
SIMILARITY: Contains 5 fibronectin type III domains.
                                                                                                                                                                                                                                  development of the nervous system. adhesion, neurite fasciculation, or

CONTRIBUTES TO THE GUIDANCE OF DEVELOPING AXONS AND REMODELING OF MATURE CIRCUITS IN THE LIMBIC SYSTEM ESSENTIAL FOR NORMAL GROWTH OF THE HYPPOCAMPAL MOSSY FIBER PROJECTION:

SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.

TISSUE SPECIFICITY: Expressed mostly by neurons comprising limbic-associated cortical and subcortical regions that function in cognition, memory, and learning.

DEVELOPMENTAL STAGE: FIRST DETECTED AT E15-16, AT STAGE E20 IT IS DETECTED IN PRESUMPTIVE CORTEX, MEDIAL LIMBIC AREAS OF THE THALAMUS AND HYPOTHALAMUS. IN THE ADULT, IT IS FOUND IN
                                                                                                                                                                                                                                                                                                                                                                          SIMILARITY: Contains 3 immunoglobulin-like C2-type domains

SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.

SUBCELLULAR LOCATION: EXPRESSED BY ALL NEUROGENIC CELLS EARLY, BUT

TISSUE SPECIFICITY: EXPRESSED BY ALL NEUROGENIC CELLS EARLY, BUT

ONLY THOSE CELLS THAT BECOME NEUROBLASTS CONTINUE TO EXPRESS IT.

EXPRESSED BY NEUROBLASTS, GANGLION MOTHER CELLS AND NEURONS EARLY

IN THEIR LIVES, BUT EXPRESSION BECOMES RESTRICTED TO A SUBSET OF

NEURONS AS DEVELOPMENT PROGRESSES. EXPRESSED BY SENSORY NEURONS AS

THEY DELAMINATE FROM THE BODY WALL ECTODERM. IT IS ALSO PRESENT ON

GROWING AXONS OF THE CNS AND ENS AND BECOMES RESTRICTED TO A

SUBSET OF AXONS LATER IN DEVELOPMENT.

DEVELOPMENTAL STAGE: EXPRESSED ON DIFFERENTIATING NEURONAL CELLS

FROM THE ONSET OF NEUROGENESIS IN BOTH THE CENTRAL AND PERIPHERAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NERVOUS SYSTEMS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     INDUCTION: By cytokines (e.g. IL-1, TNF-alpha).

FTM: Sialoglycoprotein.

DISEASE: May play an important role in the genesis of artheroselerosis and rheumatoid arthritis.

SIMILARITY: Contains 7 immunoglobulin-like C2-type domains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IN LEUKOCYTE-ENDOTHELIAL CELL ADHESION. INTERACTS WITH THE BETA-1 INTEGRIN VLA4 ON LEUKOCYTES, AND MEDIATES BOTH ADHESION AND SIGNAL TRANSDUCTION. THE VCAMI/VLA4 INTERACTION MAY PLAY A PATHOPHYSIOLOGIC ROLE BOTH IN IMMUNE RESPONSES AND IN LEUKOCYTE ENIGRATION TO SITES OF INFLAMMATION.
SUBCELLULAR LOCATION: Type I membrane protein.

-!- FUNCTION: THIS RECEPTOR BINDS POLYMERIC IGA AND IGM AT THE BASOLATERAL SURFACE OF EPITHELIAL CELLS. THE COMPLEX IS THEN TRANSPORTED ACROSS THE CELL TO BE SECRETED AT THE APICAL SURFACE. DURING THIS PROCESS A CLEAVAGE OCCURS THAT SEPARATE THE EXTRACELLULAR (KNOWN AS THE SECRETORY COMPONENT) FROM THE

Natl. Acad. Sci. U.S.A. 84:2960-2964(1987).
-!- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
-!- TISSUE SPECIFICITY: Found in adenocarcinomas of endodermally derived digestive system epithelium and fetal colon.
-!- PTM: COMPLEX IMMUNOREACTIVE GLYCOPROTEIN WITH A MW OF 180 kDa COMPRISING 60% CARBOHYDRAYE.
-!- SIMILARITY: Belongs to the immunoglobulin superfamily. CEA famil-
-!- SIMILARITY: Contains 7 immunoglobulin-like domains.
-!- DATABASE: NAME=PROW; NOTE=CD guide CD66e entry; WMW="http://www.ncbi.nlm.nih.gov/prow/cd/cd66e.htm".
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Beauchemin N., Benchimol S., Cournoyer D., Fuks A., Stanners C.P., "Isolation and characterization of full-length functional cDNA clones for human carcinoembryonic antigen.";

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              P16621,
                                                                                                                                                                                                                     tyrosine + phosphate.
SUBCELULIAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Selectively expressed in a subset of axo pioneer neurons in the embryo.
SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 9 fibronectin type III domains.
SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                                                                                                                                                                      FUNCTION: It is possible that DLAR is a cell adhesion r
It possesses an intrinsic protein tyrosine phosphatase
(PTPAse). It controls motor axon guidance.
CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DROME
